Profile

Professional, hard working JavaScript developer. I've started learning JavaScript 3 years ago and since then I've learned a handful of frameworks such as Express.js and Vue.js. I'm most familiar with the MEVN Stack but I can adapt to any other.

Even though my focus currently is on JavaScript, I started with the LAMP Stack 4 years ago, during that time I familiarized myself with technologies such as Laravel and MySQL.

I can tackle a wide range of problems, from simple landing page websites to complex eCommerce solutions.

During my time as a freelancer I learned to adapt very quickly and with ease, so I could work with whatever technologies or languages needed for the customer's application.

Employment History

Backend Developer, D-Soft, Iasi, Romania

October 2017 — June 2018

Developed client websites working closely with team members to make an amazing quality product. I was usually tasked with designing databases, implementing CRUD style controllers in Laravel and linking the design provided by the team with the backend functionality.

Education

Graduated, Computer Science High-School "Grigore Moisil", Iasi, Romania

September 2016 — May 2020

Core Skills

JavaScript

Vue.js

Express.js

GitHub VCS

CSS Frameworks (Tailwindcss & Bootstrap)

AWS

Consuming & Creating APIs

Laravel

Languages

English

Romanian

Courses and Awards

Database Design and Programming with SQL, Iasi, Romania

May 2020

Gold Award, Infomatrix 2019, Bucharest, Romania

April 2019

We made an AI app that generates a psychological profile based on a person's displayed emotions during a designated task. I was in charge of creating the ML model and UI.

Additional Activity

During my free time I like hanging out in developer communities where I talk with like minded people and I try to help others when they get stuck.
I also like to work on all sorts of personal projects that can be seen on my GitHub page, lately I've been working on mostly Discord Bots using using discord.js
